# Title : Smart Mirror that shows whether information

- Aim:

To design and develop an IoT-enabled smart mirror that seamlessly integrates a reflective surface with a digital display to present real-time weather information

- Block/Circuit/ Schematic Diagram:

- **Components Required**:
- **Software**:1.Arduino IDE
                    2.Open whether API
- **Hardware**: Lcd display,ESP32 mc, Female to female jumper wire

- **Applications:**
•Hotels & Resorts
•Retail Stores (Fashion/Clothing)
•Airports & Transport Hubs
•Corporate Offices
•Gyms & Fitness Centers
•Hospitals/Healthcare.
